

## Appointment Reminder Services

Say goodbye to "no-shows" and lost revenue.

**Missed appointments mean lost income.** Healthcare practices and other businesses know that way too much revenue is lost on "no-shows". But, the process of reminding your patients or customers can overburden your staff... *and your budget.*

**Let us do the work for you.** Using AnswerNet's unique Interactive Voice Response (IVR) system, we'll call your patients to remind them of their appointments. We'll develop and record the script using real-life talent so your customers can interact with a human voice. The caller ID will display your name and number to show that calls are originating from your office. Text and email reminders are also available.

Our cloud-based [Appointment Reminder Services](#) are HIPAA & PIPEDA-Compliant – making them ideal for healthcare providers.

### A BRIEF CASE STUDY:

#### How much does an empty chair cost your business?

*Let's take a look at Dr. Smith's office...*

One missed appointment costs her office \$100.  
On average, the practice had two no-shows per day.

*Therefore...*

- Two no-shows per day = **\$200 OF LOST REVENUE**
- 14 no-shows per week = **\$1,400 OF LOST REVENUE**
- 52 no-shows per month = **\$5,200 OF LOST REVENUE**

AnswerNet's Appointment Reminder Services cost a fraction of what Dr. Smith's office lost in revenue in just one week, let alone one month! With savings like that, why wouldn't you have this service?

**AnswerNet is ready to help make sure your appointments are kept!**
