Reach out to more customers and provide better service without additional investment in machines and lines. AnswerNet's Fax Services can free you from costly repairs and machine downtime!

With AnswerNet, we can handle your inbound and outbound fax needs. Our services allow you to pay for only the volume you require. Also, you can rest assured that our practices comply with government fax regulations.

### Fax-on-demand Services

Deliver documents and product information to your customers when they ask for it, easily and quickly. AnswerNet's Automated Faxback service frees up staff time and saves mailing expenses. You can even link it to our inbound Interactive Voice Response (IVR) services, to give callers information conveniently while waiting to speak to live agents.

### Fax Overflow Services

No more worrying if your machine is out of order. When your fax machine is busy, your inbound faxes automatically forward to your private AnswerNet GenFAX number. This process is transparent to the people trying to fax you. AnswerNet's GenFax software automatically keeps trying to fax back to your fax until it is received. Now you can avoid frustrating customers with busy fax machine tones.
